TAOLUE KURT YANG

taolue.yang@temple.edu — babyplutokurt.github.io — Google Scholar — GitHub — LinkedIn

RESEARCH INTERESTS

Efficient and scalable AI and data systems: accelerating AI training and inference, and scientific data processing, through compression and quantization. Topics include LLM quantization, KV-cache compression, and speculative decoding; GPU-accelerated data compression; compressed-domain computing; and high-performance computing.

EDUCATION

Temple University, Philadelphia, PA — 2023 – May 2027 (expected)
Ph.D. in Computer Science
Advisor: Prof. Sian Jin

Columbia University, New York, NY — 2022 – 2023
M.S. in Electrical Engineering

University of Glasgow, Glasgow, UK — 2018 – 2022
B.Eng. in Electrical Engineering, First Class Honours

RESEARCH EXPERIENCE

Graduate Research Assistant — 2023 – Present
Temple University, Advisor: Prof. Sian Jin — *Philadelphia, PA*

- **GPU-accelerated genomic data compression:** designed CuVert-Q, GPUFASTQLZ, and GFAz, GPU compressors for sequencing reads and pangenome graphs that resolve the throughput–ratio tradeoff; built the SeqBench benchmark suite. Released CuVert-Q, GFAz, GPUFASTQLZ, and SeqBench as open-source software.
- **Computing over compressed data:** extending this line to pangenome analytics computed directly on grammar-compressed graphs, without decompression (under review at FAST'27).
- **Computation sharing for genomic deep learning:** designed exact per-layer computation sharing for sequence models across thousands of haplotypes, 7.6× faster than window deduplication and 584× faster than standard inference on 1000 Genomes, with identical outputs.
- **LLM-aware lossy compression:** co-developed KVComp, PackKV, and EmbdC, error-bounded compressors that shrink KV-cache and embedding memory for LLM inference while preserving accuracy.
- **Scientific data compression:** contributed to TOPIQ (SC'26), 3D Gaussian Splatting particle compression (SC'26), error-bounded point cloud compression (VLDB'26), cross-field prediction (HPDC'25), and performance modeling for error-bounded lossy compression of HPC simulation data.
- **Interdisciplinary collaboration:** work closely with Prof. Xinghua (Mindy) Shi (Temple, bioinformatics) on biological data compression (CuVert-Q, GFAz, SeqBench, DCC'26, FAST'27).

Patents

[T1] Relaxed speculative decoding for accelerated LLM token generation. Oracle Corporation, patent application filed, 2025.

HONORS AND AWARDS

Best Paper Award, ACM-BCB 2026 (for CuVert-Q) 2026
First Class Honours, University of Glasgow 2022

TEACHING EXPERIENCE

Teaching Assistant, Temple University 2024

- **CIS 1068: Program Design and Abstraction** – Spring 2024 (2 sections), Fall 2024 (1 section)
  First required programming course in the CS major: Java, object-oriented programming, searching and sorting.
  Duties: led weekly lab sections, taught algorithm topics (e.g., searching and sorting) and Java programming in lab, graded assignments and exams, and held weekly office hours.
- **CIS 2109: Database Management Systems** – Fall 2024 (1 section)
  Undergraduate data modeling, SQL, and database application development.
  Duties: led weekly lab sections on SQL and database design, graded assignments, and held weekly office hours.

Teaching Interests
Undergraduate: introductory programming and data structures; computer systems and architecture; parallel programming; database systems.
Graduate: LLM systems (efficient training and inference, quantization, KV-cache optimization, serving); high-performance computing and GPU/CUDA programming; data compression for scientific and AI workloads.

INDUSTRY RESEARCH EXPERIENCE

Software Engineer Intern May 2026 – Aug 2026
Google, Cloud AI (Vertex AI) *Sunnyvale, CA*

- Built a large-scale post-training quantization (PTQ) evaluation framework on GCP Slurm that benchmarks quantized LLMs for accuracy, KL divergence from the full-precision model, and serving throughput.
- Established hardware-aware PTQ deployment best practices for Vertex AI, benchmarking and tailoring quantization recipes across GPU platforms (A3 High, A3 Mega, A3 Ultra, A4) and model families.
- Accelerated quantization-aware training (QAT) with GRPO in **NeMo-RL/Megatron** by **70%** by caching and reusing fake-quantized weights; change accepted upstream by NVIDIA.
- Diagnosed and fixed a Megatron weight-folding bug in **NVIDIA ModelOpt**; fix adopted upstream by NVIDIA.
- Researched quantization-aware reinforcement learning for LLM post-training, studying quantization across the training, rollout, and KV-cache stages to reduce compute cost while preserving reasoning quality.

Software Engineer Intern Jul 2025 – Oct 2025
Google, AI and Infrastructure (MaxText) *Kirkland, WA*

- Optimized large-scale Mixture-of-Experts (MoE) LLM inference throughput on TPUs.
- Implemented Mixture of Block Attention (MoBA) in JAX for both training and inference.
- Designed and integrated interleaved prefill and batch decode with MaxText as the JAX inference backend.
- Developed a fully compatible OpenAI-style API server for MaxText, enabling seamless deployment.
- Integrated **lm-evaluation-harness** and **Evalchemy** into MaxText for up to **30**× faster evaluation.

Software Engineer Intern Jan 2025 – Jul 2025
Oracle, MySQL HeatWave *Redwood City, CA*

- Developed an optimized relaxed speculative decoding algorithm that accelerates LLM token generation in Oracle HeatWave clusters by **1.5**×; filed a patent on this work.
- Built an 8-bit quantized LLM inference stack for AMD CPUs, combining grouped weight quantization with SIMD AVX-512 and AMD BLIS int8 GEMM kernels, achieving a **4.5**× speedup over open-source llama.cpp on CPU prefill.
- Developed a grouped KV-cache layout that packs 64 key activations per group for efficient 8-bit storage and AVX-512 GEMM, accelerating long-context prefill by up to **20%** in llama.cpp.
- Optimized weight quantization strategies for the LLM decoding phase using AVX-512, improving CPU inference throughput by **15%** over the Q4_K_M baseline.

AI Engineer Intern Jun 2023 – Sep 2023
Oortech *New York, NY*

- Developed a LangChain agent for an LLM-based chatbot, enabling semantic search over user queries.
- Implemented a Python web crawler to collect data for LLM fine-tuning and chatbot development.
- Built a text splitter and Python executor for the data loader, supporting structured inputs to the agent.

OPEN-SOURCE CONTRIBUTIONS

NVIDIA NeMo-RL (upstream contributions)

- #3226: FP8 KV-cache scale propagation in the colocated refit path.
- #3441: Avoiding redundant weight fake-quantization during QAT logprob computation.
- #3556: Caching fake-quantized weights across QAT training microbatches.

NVIDIA ModelOpt

- #2131: Debugging `fold_weight` behavior with Megatron tied embeddings.

Research software: CuVert-Q, GFAz, GPUFASTQLZ (GPU genomic compressors); SeqBench (benchmark suite).
Other projects: MaxText, vLLM, lm-evaluation-harness.

ACADEMIC SERVICE

Conference Reviewer (7 papers reviewed)

- ACDSA 2026 and 2027 (5 papers): Intl. Conf. on AI, Computer, Data Sciences, and Applications
- ICECET 2026 (2 papers): Intl. Conf. on Electrical, Computer and Energy Technologies

TECHNICAL SKILLS

Languages: C++, CUDA, Python **Frameworks:** PyTorch, JAX, Megatron, vLLM, SGLang
